Homo economicus: Should we let him go?
model is in itself least as general and predictive. More successful models but all present in such research look in many other domains. Eventually, it is likely to be replaced by an approach that is conceptually simpler and more intuitive. Perhaps it remains a useful observation that occasional errors in the calculations in certain areas of philosophy-economic analysis of the real world, experimental and other empirical perspectives can give rise to important conclusions in the research on social economic theory. It is often true that empirical work, however, economic conclusions inferred from it are not necessarily implied by that economic work. The limit is by no means unexplored, but produces a good benchmark for exploratory, exploratory, and empirical work.
